

### Abstract of disclosure

5       The Wireless Information Meter is a meter that has solved the many  
10       problems of having to use wires to send and receive information from and to  
15       meter. Now that the meters can be wireless where they can save in additional  
20       cost and installation and also solve the many problems that come along with  
25       having to use wires in hooking up to operate and receive and send  
30       information. What is very unique about this invention is that the meter can  
35       be placed a great distance from the source the information is be received or  
40       sent to making the meter more versatile then any wired meters. This meter  
45       can perform many functions in one meter without the use of any wires to  
50       power it, get information or receive information and can display the  
55       information in the meter display with and without the use of control button  
60       on the meter and is totally waterproof for indoor or outdoor applications.
